DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments filed 2/6/2007 have been fully considered but they are not persuasive.
- 2. The applicant asserts, on page 6, that prior art Thomas fails to disclose multiple openings. The examiner disagrees. Thomas discloses multiple openings (Figure 3). The applicant then asserts, on page 7, that having multiple openings in a casing is desirable for improving sound on one hand but on the other hand having multiple openings, as explained by AAPA, may leave the microphone element vulnerable. The applicant further asserts that that prior to the applicant's invention, achieving a microphone casing having both multiple openings for improved sound and a protective tortuous path was not known. The applicant essentially argues intended use. In response to applicant's argument that prior to the applicant's invention, achieving a microphone casing having both muting openings for improved sound and a protective tortuous path was not known, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. Thomas's structure is capable of providing improved sound.
